1	General Introduction	11
1.1	Foreword	11
1.2	Examples of ERL science	13
1.2.1	What goes on deep inside the earth and planets?	13
1.2.2	Can we improve polycrystalline materials?	14
1.2.3	Can we determine macromolecular structures of molecules that are difficult to crystallize?	16
1.2.4	What is the physics of the glass transition?	17
1.2.5	Can we understand the dynamics of macromolecules in solution?	18
1.2.6	Can we better understand interfacial processes and defects?	19
1.2.7	Can we improve energy storage, photovoltaic, and photolytic materials?	21
1.3	ERL Overview	22
1.3.1	What is an ERL?	22
1.3.2	Overview of an ERL Upgrade to the Cornell Electron Storage Ring (CESR)	23
1.3.3	Outstanding features of the ERL design	25
1.3.4	Cornell's location for an x-ray ERL	28
1.3.5	ERL design and layout	30
1.4	Timeline	31
1.4.1	ERL developments	31
1.4.2	Engineering design and timeline	33
1.5	Historical NSF, New York State, and Cornell Context	34
1.5.1	NSF Light Source Panel Report	34
1.5.2	Cornell Phase 1 ERL research and development	36
1.5.3	New York State and Cornell support	37
1.5.4	Historical Cornell context of CLASSE	38
1.6	Scope of this Project Design Definition Report (PDDR)	39
