

First Attempt to Model Electron Cloud Buildup for the TE-Wave Experiments Presently Underway

(Additional plots for electron beams and 0.2, 2.0 mA/bunch added 30 January 2009)

Jim Crittenden

Cornell Laboratory for Accelerator-Based Sciences and Education

Electron Cloud Simulations Meeting

Wilson Lab

28 January 2009

- CESR lattice bmad_12wig_2085_20081103 (similar to cta_2085MeV_20081107)
- Photon rate and relative drift/dipole contributions derived from DLR's sync rad tables
- Modelling uses the CERN ECLOUD algorithm with some modifications
- 45 1.0 mA bunches, followed by ten empty bunches, 14 ns spacing
- Beam RMS size 1.66 x 0.02 x 10 mm. Emittances 130 nm and 40 pm.
- ECLOUD bunch time +- 3.4 sigma: 0.23 ns
- Elliptical beam pipe 4.5 x 2.5 cm
- Positron beam: 0.27 (0.55) s.r. photons per beam particle in drift (dipole/1.2kG) region
- Electron beam: 0.45 (0.51) s.r. photons per beam particle in drift (dipole/1.2kG) region
- QE 10%
- 25k macroparticles generated per filled bunch
- SEY parameters: SEY=1.7, Epk = 170 eV
- 150 steps per bunch length, 300 steps between bunches
- 11 field calculations during each of 55 bunches, filled and empty

Lattice: bmad_12wig_2085_20081103

Element	Length	Fraction	$\langle \text{Beta X} \rangle$	$\langle \text{Beta Y} \rangle$	Phot/m/e	Frac*Phot/m/e

Photon Rate/Power

Positron Beam --->

<--- Electron Beam

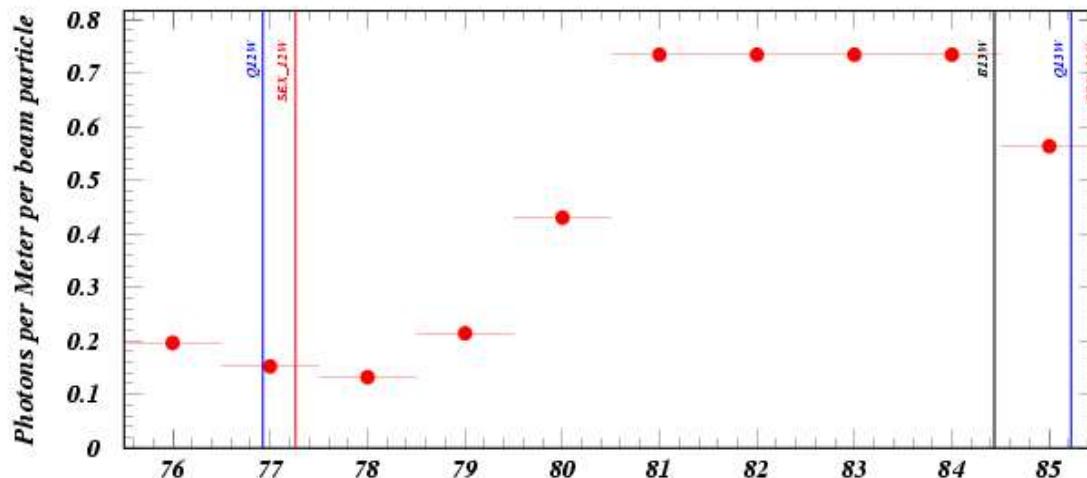

See Gerry's talk of 10 December 2008 for a discussion of photo-electron yield dependence on photon energy. The cloud buildup modelling presented here does not take into account a possibly higher quantum efficiency in the drift region for the positron beam.

Sync Rad Photon Rate per Meter: 1-m Averages

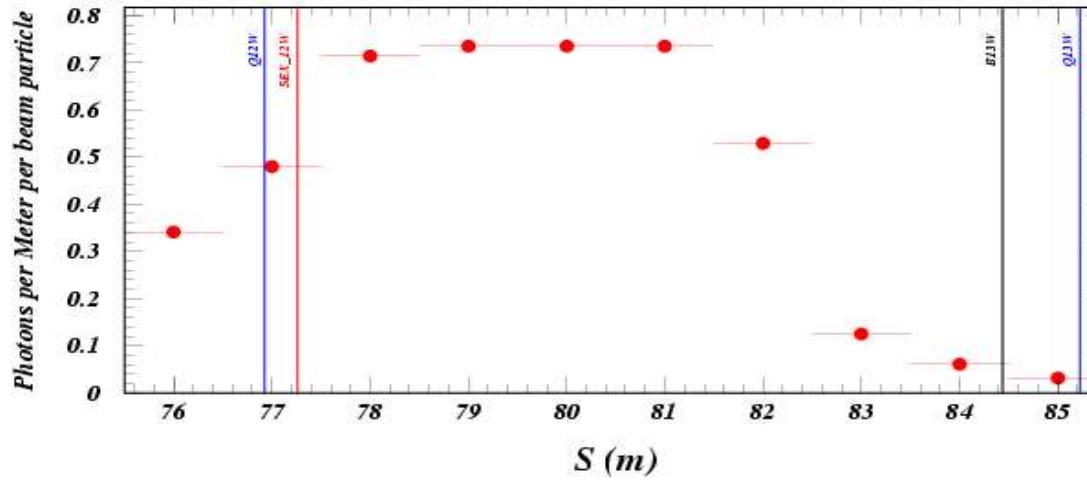

$76.329 < s < 85.578 \text{ m}$

bmad_12wig_2085_20081103/synch_power_positive_x_side_positron - 1-meter averages

Positron Beam

Electron Beam

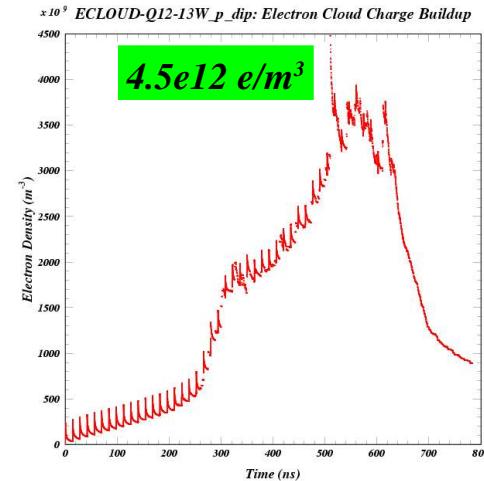

1.1 kG Dipole

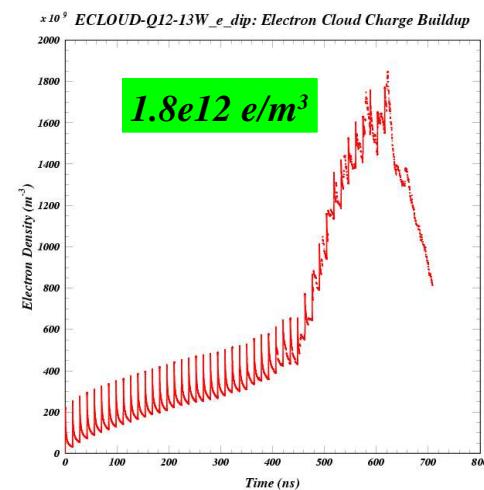

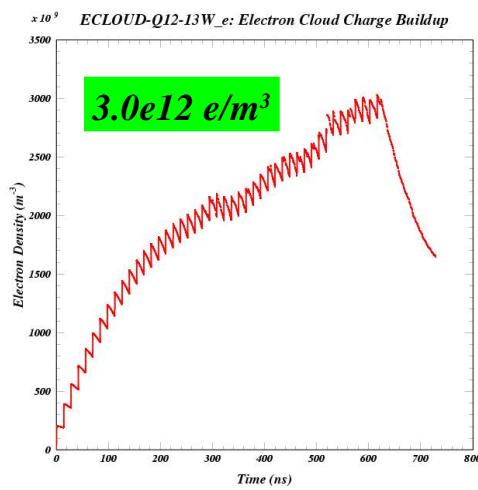

Drift Region

1.1 kG Dipole

Positron Beam

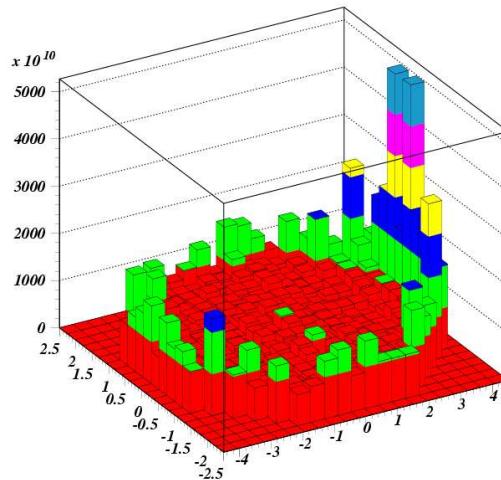

- No saturation for this case
 - Expect dipole region to dominate
 - Electron beam cloud less dense
 - Multipacting effects manifest
- They can be reduced by reducing the bunch current (measurements have been taken)*

Electron Beam

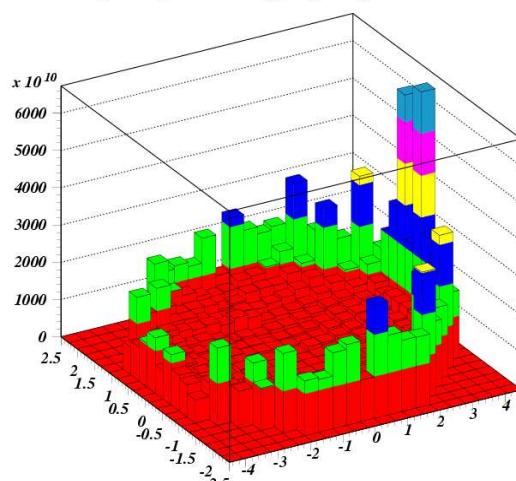

Drift Region

Q12-I3W_p: Cloud Density (e/m^3) Averaged Over 783.77 ns
