Beam parameters

	Drift	Dipole	Drift
Number of bunches	10	10	10
Bunch spacing interval	14	14	14
Bunch intensity	0.75	0.75	0.75
Particles per bunch	1.2	1.2	1.2
Total beam intensity	7.5	7.5	7.5
Horiz. Emittance (rms, geom)	132	132	133
Vertical Emittance (rms, geom)	1.32	1.32	1.33
Horiz beta	19.64	15.36	18.31
Vertical beta	18.82	18.75	16.49
Horizontal beam size (rms)	1.61	1.42	1.56
Vertical beam size (rms)	0.16	0.16	0.15
Bunch length (rms)	12.6	12.6	17.24
Bunch duration (rms)	42	42	57
Particle species	positrons	positrons	positrons
Circumference	768.43	768.43	768.43
Beam energy	1.89	1.89	5.29

Chamber parameters

Geometry	elliptical	elliptical	elliptical
Radius	4.5H X 2.5V	4.5H X 2.5V	4.5H X 2.5V
Material	Aluminum	Aluminum	Aluminum

Magnetic field parameters

	field free	Dipole	field free
Type	field free	Dipole	field free
Length		1	1
Field strength		0	715

Radiation parameters

Photon intensity	0.23	0.53	0.58
Weight factor	0.25	0.59	0.23

Photoeffect parameters

Quantum efficiency	0.1	0.1	0.1
Reflectivity	15	15	10
Photoelectron peak energy	5	5	5
Photoelectron rms energy spread (gaussian)	5	5	5
Rms width of vertical size of radiation stripe (gaussian)	1	1	1
Power in angular distribution (dN/domega=costheta^pangphel)	1	1	1

SEY parameters

Material	Aluminum	Aluminum	Aluminum
Total SEY yield maximum	1.8	1.8	1.8
SEY yield peak energy	310	310	310

Elastic electron parameters

R(inf) (Elastic yield at high energies)	0.02	0.02	0.02
R(E0) (Elastic yield at peak)	0.45	0.45	0.45
Location of maximum value of R	0	0	0
Typical energy width of elastic SEY yield	15	15	15
rms energy spread of "elastic" secondaries	2	2	2
Power used in exponential	1	1	1
Yield angular dependence parameter	0.26	0.26	0.26
Power used in angular dependence	2	2	2

Rediffused electron parameters

Rediffused yield at high energies	0.16	0.17	0.16
Energy scale for incident energy dependence	0.04	0.04	0.04
Power used in exponential	0.1	0.1	0.1
Power used in energy scaling for rediffused secondaries	0.5	0.5	0.5
Yield angular dependence parameter	0.26	0.26	0.26
Power used in angular dependence	2	2	2

True secondary parameters

Peak energy	310	310	310
Yield at peak energy	1.62	1.62	1.62
Power used in scaling function	1.54	1.54	1.54
Yield angular dependence parameter	0.66	0.66	0.66
Power used in angular dependence	0.8	0.8	0.8
peak energy angular dependence parameter	0.7	0.7	0.7
Power used in angular dependence	1	1	1
Scaling function power angular dependence parameter	0	0	0

Power used in angular dependence	0	0	0
Secondary energy power scaling parameter for n=1	2.5	2.5	2.5
Secondary energy power scaling parameter for n=2	3.3	3.3	3.3
Secondary energy power scaling parameter for n=3	2.5	2.5	2.5
Secondary energy power scaling parameter for n=4	2.5	2.5	2.5
Secondary energy power scaling parameter for n=5	2.8	2.8	2.8
Secondary energy power scaling parameter for n=6	1.3	1.3	1.3
Secondary energy power scaling parameter for n=7	1.5	1.5	1.5
Secondary energy power scaling parameter for n=8	1.5	1.5	1.5
Secondary energy power scaling parameter for n=9	1.5	1.5	1.5
Secondary energy power scaling parameter for n=10	1.5	1.5	1.5
Secondary energy exponential scaling parameter for n=1	1.5	1.5	1.5
Secondary energy exponential scaling parameter for n=2	1.75	1.75	1.75
Secondary energy exponential scaling parameter for n=3	1	1	1
Secondary energy exponential scaling parameter for n=4	3.75	3.75	3.75
Secondary energy exponential scaling parameter for n=5	8.5	8.5	8.5
Secondary energy exponential scaling parameter for n=6	11.5	11.5	11.5
Secondary energy exponential scaling parameter for n=7	2.5	2.5	2.5
Secondary energy exponential scaling parameter for n=8	3	3	3
Secondary energy exponential scaling parameter for n=9	2.5	2.5	2.5
Secondary energy exponential scaling parameter for n=10	3	3	3

Numerical Parameters

Time step during bunch	3.36	3.36	4.60
Time step between bunches	91.60	91.60	88.50
Number of macroelectrons generated per bunch	12000	30000	12000
Central density-x dimension	4.50	4.50	4.50
Central density-y dimension	0.05	0.05	0.05
