Cornell bmad tracking studies

This webpage
https://www.classe.cornell.edu/~dlr/g-2/BmadOutputData.html
has links to various tracking simulations, and muon phase space distributions.
The list of "configurations" is an attempt to reproduce a subset of the June-July 2017 commissioning runs. All of the simulations of commissioning runs assume protons.

The "Distribution at Inflector Exit" is the phase space of muons that survive propagation through the inflector and into the ring.
